

PERMANENTLY MOUNTED MAINS-POWERED STIMULATOR

ART. 97-MA

IN COMPLIANCE WITH
EC
REGULATIONS

Special features

General information

This unit provides electrical power to a prod that gently stimulates animals in the passageway which leads to the stunning cage. This operation **prevents the animals from becoming unruly, with consequences that sometimes have a negative effect on the final outcome of stunning and on the subsequent quality of the meat.**

Description

The compact control panel contains controls which are arranged in a simple manner for instantaneous use.

Specially designed instruments regulate the output voltage, so that the electrical charge is applied to the animal without injuring it.

The panel is designed for permanent indoor installation. Special brackets are furnished for mounting the unit and for connecting it to the power mains. An electrical mains system with only average capacity is sufficient for powering the unit.

The new **97MA stimulator** is equipped with an output current control system and quick-blowing fuses that protect the unit if a short circuit occurs.

The **prod voltage is permanently set.**

The 220 V fuse on output power with transformer prevents damage to the skin and meat of the animal.

The auto-stop function, with manual reset, trips when the mains power fails.

The 50 centimeter prod has an automatic button on the tip and a 5 meter cord.
